ENVIRONMENTAL PROTECTION POLICY

At READS, we take the protection of the environment very seriously, adopting a strict confine-and-control approach throughout our operations. Our commitment is to reduce industrial waste, prevent pollution and protect the environment by taking a wide variety of measures listed below. These measures comply with or exceed the requirements of environmental legislation. This policy will be regularly reviewed in the light of legislation / company changes to demonstrate our commitment to continued improvement of our environmental performance through setting and reviewing environmental objectives.

- Management of Industrial Waste

We have a comprehensive industrial waste management system and take the storage and management of industrial waste very seriously. We strive to recycle resources whenever possible. Scrap copper winding wire, scrap motors and paper are recycled. Oily water purification tanks are regularly cleaned and serviced.

- Substantial Noise Control Measures

We have implemented noise control measures to rectify all situations where noise levels exceed 90 dB(A). Furthermore, sound proofing materials are installed around any equipment that creates 85 dB(A) of noise or more in order to prevent noise pollution.

- Exhaust Management Systems

We spare no effort when it comes to air quality management. In striving for perfection, we continuously improve our control equipment, find new ways of reducing emissions and perform regular inspections and maintenance on our equipment.

- Minimize Environmental Impact

We are mindful of our daily impact on the environment. As a result we minimize electricity and water consumption and recycle and re use materials wherever possible.

- Responsibilities

All Management and Employees have the responsibility of implementing this policy by complying with the intent of the policy and complying with documented procedures, work instructions to achieve continual improvement of environmental performance.

Mark Wilson
(General Manager)
